

Certificate in

# .NET Enterprise Development

PROFESSIONAL DEVELOPMENT

## LEARN TO BUILD 'KILLER APPLICATIONS'

The wealth of new features and capabilities incorporated into .NET, means that developers who want to stay current will need to upgrade their skills. If you want to learn how to build killer applications for Windows and the web, the six certificates that make up the overall Certificate in .NET Enterprise Development are the perfect path. They include:

- **.NET Programming Language:** Learn to develop code and progress toward developing applications for the .NET environment.
- **Data Technologies for .NET:** Learn to integrate SQL and SQL/XML data with the latest .NET technologies.
- **.NET Presentation Design:** Focus on using and implementing AJAX and ASP.NET to build interactive and highly-personalized web applications.
- **.NET Application Design:** Gain the skills to develop Enterprise applications and services using Web Service technologies and WCF.
- **Silverlight/WPF:** Focus on WPF architecture and building GUI applications using ExpressionBlend and C#.
- **.NET Security:** Develop the skill to secure Web and LAN-based applications.

## .NET Enterprise Development Certificate graduates will be able to:

- Write basic programs for the .NET environment
- Create graphics and animated structures using WPF
- Integrate data from multiple data sources
- Create scalable data-driven web sites
- Create web sites using ASP.NET & AJAX
- Implement communications using WCF
- Create next-generation applications for servers, databases and dynamic web sites

## ELIGIBILITY

Prior programming experience is a prerequisite for admittance to this program.
